

VerifAir

REAL-TIME FINE-PARTICLE MONITORING

See changing conditions. Respond earlier.

VerifAir connects Dustlight PM1 and PM2.5 monitoring, extended site connectivity, local resilience, alerts, dashboards and evidence-ready reporting across dust-sensitive projects.

Demonstration interface shown. Final configuration depends on project scope.

One connected monitoring workflow

1

Monitor

Dustlight devices capture PM1 and PM2.5 at selected zones.

2

Connect

Configured site connectivity extends beyond direct Bluetooth access.

3

Preserve

Local buffering helps retain data during temporary interruptions.

4

Respond

Authorised teams review dashboards, alerts and reports from anywhere.

Typical project outcomes

- Earlier visibility of changing fine-particle conditions
- Coordinated alert and response workflows
- Shared dashboard access for authorised teams
- Time-stamped records for review and reporting
